

SIMATS ENGINEERING

Saveetha Institute of Medical and Technical Sciences
Chennai- 602105

Student Name: M.S.Charishma

Reg. No: 192311393

Course Code: CSA1558

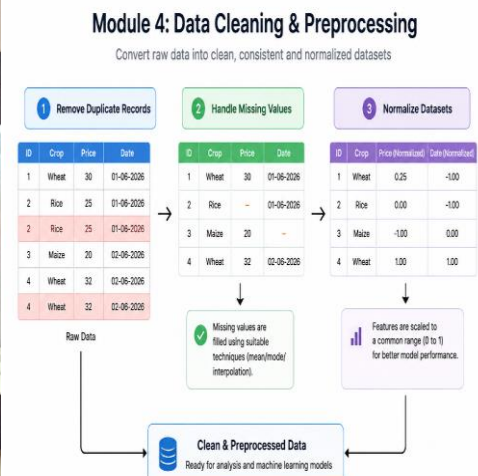

Slot: C

Course Name: Cloud Computing For Big Data Analysis

Course Faculty: Dr. A Gnana Soundari & Dr. Antony Joseph Rajan

Project Title: Farm Market Link: Agricultural Pricing and Demand Forecast

Module Photographs: (3 photographs –Module Photo, Individual student contribution module work in the project and presentation image)

Project Description: (here you write what you did in this project (contribution) including Model Description)

In this module, a Data Cleaning and Preprocessing system was developed to improve the quality and reliability of agricultural datasets before analysis and forecasting. Duplicate records were identified and removed to eliminate data redundancy and ensure consistency. Missing values were handled using appropriate preprocessing techniques to maintain data completeness and accuracy. The datasets were then normalized to standardize feature values and improve machine learning model performance. Various preprocessing operations were applied to transform raw agricultural data into a structured and analysis-ready format. The system helps reduce errors, enhance data quality, and ensure reliable inputs for forecasting models. This contribution supports accurate prediction results and efficient data management throughout the project. The preprocessing pipeline also improves scalability by handling large datasets effectively.
